

Supplementary Information - Video

Supplementary Video 1-2 show the band formation. The field is always applied in the horizontal direction. The videos are not real time, but slightly speeded up; Video1: 10.28x, Video 2: 5.02x. Video 1 makes a small jump in time at 10, 20, and 30 seconds (playing time).

Video 1 shows band formation for oppositely charged particles with a diameter of ca. 2.5 μm , corresponding to Fig. 1 in the main text.

Video 2 shows band formation and dissolution for particles with a diameter of ca. 1 μm , corresponding to Fig. 2 in the main text.
